

# Choosing the future is building the present!

We design and implement solutions in step with the times

Since 2007, SETEC has been providing services in the field of telecommunications and, thanks to a strong specialization in the design and implementation of complex systems and partnerships with major carriers and multimedia operators, it is able to provide high-tech solutions and highly specialized services for every customer need, guaranteeing, in addition, the highest skills and autonomy necessary for each type of activity.

In 2022, continuing on its growth path, SETEC extends its services into the world of civil and industrial technological systems (power, air conditioning and plumbing). With this expansion, SETEC is now able to provide, in addition to ICT services, the design and construction of civil and industrial systems in the fields of electricity, plumbing and air conditioning.

SETEC stands, therefore, as a highly specialized supplier capable of responding to every customer need and guaranteeing the highest skills and autonomy necessary for every type of activity. Moreover, every solution that SETEC proposes, whether it is design or implementation, complies with the highest operational and quality standards thanks to the combination of state-of-the-art execution methodologies and time management.

Our vision is to distinguish ourselves:

- For continuous interest and updating to technological innovations;
- For a high degree of professionalism in design and installation;
- For continuous training of technical personnel;
- For logistical management of means and technicians to achieve the best performance.

Our investment in company resources allows us to have qualified skills, certifications and high-level qualifications in the fields in which we operate. All this allows SETEC to play a leading role in the current and most advanced technologies.

## PASSION

The passion and daily commitment of our staff make SETEC a value-added company. Passion in one's work implies curiosity and study, which are then applied in order to offer high-performance solutions that can satisfy even the most demanding customers. By applying ourselves with good will and all our strength, we can achieve our goals with the best solutions.

## EXPERIENCE

The consolidated experience gained over the years allows us to offer the highest quality of our achievements. SETEC has always been operating in multiple technological sectors, collaborating with the leading companies in the sector, offering its solutions and professionalism to major clients in the field of Telecommunications, Airport Operators, Central and Local Public Administration and private companies. Each of our realizations in its uniqueness makes SETEC one of the leading companies in the field of technology and infrastructure.

## CREATIVITY

We make our ingenuity available to customers to create innovation and alternative solutions that allow us to be in step with the times and at the same time ahead of them.

## TRUST

Each of our customers knows that they can find in SETEC a partner and not just a technology service provider. It is precisely this trust that binds us today to longstanding customers whom we have been following for more than a decade and who know the reliability of our technicians and the services we offer.

## Networking

We implement Routing and Switching architectures and IP Multiservice network infrastructures. We ensure efficient network utilization using only certified products equal to or exceeding quality standards. We make use of partnership with leading reference vendors.

## Physical Security

We realize installations by choosing the most suitable solution for the intended use. We use the most advanced technologies offered in the market (optical, thermal, access control, etc.) and an innovative system involving automated aerial remote sensing using drones for the inspection of buildings and urban and private areas.

## Unified Communication

We possess the expertise to manage and configure all technologies used for VoIP and traditional (analog and digital) voice. We make use of our partnership with Wildix and the Avaya certifications we have achieved.

## Wireless and Mobility

We implement solutions based on the use of the latest generation of Wi-Fi technologies with provision of client devices, access points and controllers to ensure that users can access the corporate network even on the move. We implement DAS systems capable of bringing to the most difficult environments the wireless signal through the use of small cells connected to TELCO 4G/5G networks. We realize the installation of antennas and radio stations for point-to-point and point-to-multipoint connections (hyperlink and radiolink) operating on 5Ghz and 24 Ghz frequencies

## Software Development

Making use of a dedicated group we are able to realize application solutions from a process perspective (process based). The development process integrates all IT activities dedicated to software creation, design, deployment and support providing the customer with a tool adherent to the business.

## Customer Support

We are able to offer out-sourced service for problem analysis, monitoring and maintenance of the network and related devices. This service consists of the following activities:

**Desktop Management; Software Management;  
Change Management; Ticket Handling; IMAC**

# Energy, Plumbing and Air Conditioning

SETEC holds certifications in the macro-areas Industry and TLC - Fire Protection D.M. RI 00224-P-00046; Plant Compliance Declarations - Calculation of Hazards from Atmospheric Discharges - 37/08 (former 46/90) from A to G - RES Photovoltaic Plants.

## Electrical Installations

We can make and certify any type of Civil and Industrial electrical installations, Technological Installations for group 0, group 1 and group 2 medical centers (operating rooms), AD-PE Explosion Proof Installations (Fuel and Ammunition depots), MV/LV Cabins, Power Stations.

## Alternative Energies

We can meet the demand for photovoltaic and micro-wind power plants, DHW thermal treatment with internal combustion systems or heat pump with solar integration

## Air Conditioning and Air Treatment

We specialize in industrial air conditioning systems, Aeraulic, Treatment with air exchange in accordance with current regulations with filtering and sanitization systems by bacteriological abatement with UV rays or Photocatalysis.

## Plumbing and Thermohydraulics

We carry out any kind of plumbing and thermohydraulics, water disposal systems and Fuel Gas Distribution Systems

## Safety and Fire Protection

We are qualified to perform Atmospheric Discharge Protection Systems, Stray Current Cathodic Protection Systems, Alarm, Intrusion and Access Control Systems, Fire Detection Systems, Sprinkler, Hydrant, Foam or Inert Gas Automatic Extinguishing Systems, REI Compartmentation and Confinement Systems.
